

Verratstrauma Theorie

Description

Verratstrauma Theorie (Betrayal Trauma Theory) geht davon aus das Kinder die von Ihren primären Bezugspersonen missbraucht wurden eine Amnesie (Gedächtnisverlust) für das Trauma entwickeln da das Bewusstsein des Missbrauchs Ihr Überleben gefährden würde. Sie sind schließlich von der Versorgung (Nahrung, Kleidung, Zuneigung, Schutz, etc.) der Bezugspersonen abhängig (Machtasymmetrie).

Diese Theorie lässt sich m.E. auf die aktuelle Corona Propaganda Situation übertragen. "Vater Staat" wird in diesem Szenario von der Allgemeinbevölkerung als eine überlebenswichtige Instanz wahrgenommene. Der Fakt das die Bürger systematisch psychologisch traumatisiert werden (Maskenpflicht, social distancing, Angsterzeugung, und andere *trauma based mind-control* Techniken a la Tavistock) muss ignoriert werden um nicht in "Ungnade" zu fallen.

Inhibierte Epistemologie: **Es ist kognitiv sehr schwierig die Wahrheit zu erkennen wenn das Gehalt (und Überleben) davon abhängt Sie nicht zu erkennen.** (Ein quasi evolutions-psychologisches/psychodynamisches Argument)

Freyd's (1996) betrayal trauma theory holds that children sexually abused by their caretakers are prone to develop amnesia for their abuse because awareness of abuse would imperil the survival of victims by disrupting their attachment to caretakers on whom they depend for food, shelter, and clothing.

Institutional betrayal refers to wrongdoings perpetrated when an institution fails to prevent or appropriately respond to wrongdoings by other individuals. In instances when individuals experiencing traumatic events place a great deal of trust in the legal, medical, and mental health systems to address their wrongs they risk disbelief, blame, and refusal of help. Priorities of the institution, such as protecting their reputation, may increase the likelihood that institutions fail to respond appropriately. Institutions may strenuously attempt to prevent knowledge of said assaults from surfacing, which can take the form of attempting to silence the individual. Lack of validation and interpersonal trauma from institutional betrayal can be examined through a BTT lens and have been described as a "second assault," which can exacerbate the effects of the initial trauma incurred.
